

THINC

infrastructure

“Thinc Projects provided Transport NSW (TNSW) with Project Management Services for the development phase of the North Sydney Freight Corridor (NSFC) program. The Thinc project manager (Sam Cook) assisted TNSW to coordinate and manage the regular Project Control Group meetings attended by the key stakeholders of the program. The service provided by the Thinc manager was professional, timely and well executed.”

*Deva Mylvaganam
Infrastructure Division, Transport NSW*

“Sam has understood our culture and the way we do business, and fitted in with our processes, in an exceptional way. He is full of energy, smart, and his communication with us - the client - is also very, very strong”

*Grant Males
Manager – Finance,
Australian Rail Track Corporation*

Who Is Thinc?

We work as independent advisors to those in the built environment, health, infrastructure and resources sector. We also manage projects across these industries.

We aspire to make a difference - economically, socially and environmentally. At Thinc we employ and develop the best people in their fields. We value their expertise, just as we value that of our clients. We are genuine believers in the power of collaboration. Time after time, we've shown it delivers exceptional results.

We're big but agile. Our size gives us the ability to move teams where they're needed, when they're needed. We pride ourselves on meeting our client's needs and focusing on the issues that really matter to them.

We are innovative and operate with initiative and integrity. These attributes are widely recognised. As a result, at any given point Thinc will be providing advisory and management services on projects ranging in value from a few million dollars to several billion dollars.

Advice + Action

Every project presents challenges. At Thinc, we anticipate these challenges and meet them head on. We are creative in our thinking, so the advice we offer consistently translates into well-run, efficient projects.

As we are independent, we're not part of a construction, engineering or finance company, nor are we bound by industry-specific ways of doing things. We look at every client's job on its own terms. We focus objectively on every project and deliver bespoke advice and action on specific issues.

Thinc's systems-based approach imposes a high level of discipline and structure across a project's entire lifecycle. Our size – coupled with our local market knowledge – allows us to complete projects with confidence and within agreed time, cost and quality parameters.

Our proven ability to deliver the right advice and action allows us to get the best possible outcomes on every project we work on.

Our Infrastructure Team

The Thinc Infrastructure team is made up of sector-focused personnel with specialist knowledge of rail, roads, airports, seaports, water and energy. Typically, team members have an engineering background which is supplemented by formal and 'on-the-job' project management training and experience.

The Infrastructure team members are located throughout Australia, enabling them to combine national presence and perspective with a genuine understanding of local conditions.

Leveraging Thinc's extensive experience in major property and capital works projects, the Infrastructure team has an in-depth knowledge of the best and latest project management methodology which, combined with the Thinc systems and discipline, gives them the capacity to make traditional processes in the transport, energy and water sectors more efficient and economical.

Our team works holistically across a project's lifecycle, from managing feasibility studies to maintaining mature assets. We're experienced in managing the micro-components that make up large infrastructure projects as well as planning and delivering macro strategies.

Thinc sits on a range of government panels across Australia including:

- NSW Department of Premier and Cabinet - Performance and Management Service
- NSW Department of Commerce
- Queensland Department of Transport and Main Roads
- South Australian Water
- South Australian Department of Transport, Energy and Infrastructure – Transport PM
- NT Department of Construction and Infrastructure
- NT Power and Water Corporation
- Victoria Department of Treasury and Finance
- Victorian Construction Supply Register

We are creative in our thinking, so the advice we offer consistently translates into well-run, efficient projects

Our Approach

Our first step on all new projects is to ensure we clearly understand our clients' needs. Once we've gained this understanding, we identify the services that will ensure these needs are met. Throughout the term of service Thinc representatives will regularly review our service performance with clients and make adjustments if required.

We're committed to providing our clients with a professional service drawing on our team's combined capability and Thinc's proven systems and processes to do so. We seek to manage our clients' risk effectively and efficiently.
